DESCRIPTION OF TECHNOLOGY

The technology in this project centers around Large Language Models. Leveraging advanced Natural Language processing, the system will comprehend vast textual product data and through fine-tuning, generate precise responses to queries about the data it has been trained on.

HUMAN VALUES

N/A

TRANSPARENCY

The technology inner architecture can be quite confusing to non technical users but the high-level explanation of how the technology arrives at its answers is available online. For the transparency of the business model of the technology company yes the business model is mentioned to the clients to ensure they understand how we work.

IMPACT ON SOCIETY

Product manufacturing companies accumulate extensive catalogues of data over time. Consequently, it becomes challenging to efficiently educate new employees about the products. Moreover, when customer service agents are confronted with queries about specific products, they frequently have to consult the product development team for information. This results in distractions during the product development phase

STAKEHOLDERS

- Customer service Agents

SUSTAINABILITY

HATEFUL AND CRIMINAL ACTORS

N/A

DATA

Yes, I am familiar with the fundamental shortcomings and pitfalls of data. To address these issues I implement rigorous data pre-processing before training the LLM. Additionally, post-training, I ensure to tell all stakeholders that the technology functions as a co-pilot rather than an infallible solution.

FUTURE

PRIVACY

No, the technology hasnt been made in mind to register personal data.

INCLUSIVITY

With the current clients data being product data, I do not see the possibility of the technology having a built-in bias.

DESCRIPTION OF TECHNOLOGY
The technology in this project centers around Large Language Models. Leveraging advanced Natural Language processing, the system will comprehend vast textual product data and through fine-tuning, generate precise responses to queries about the data it has been trained on.

IMPACT ON SOCIETY

What is exactly the problem? Is it really a problem? Are you sure?

Can you exactly define what the challenge is? What problem (what 'pain') does this technology want to solve? Can you make a clear definition of the problem? What 'pain' does this technology want to ease? Whose pain? Is it really a problem? For who? Will solving the problem make the world better? Are you sure? The problem definition will help you to determine...

HATEFUL AND CRIMINAL ACTORS

In which way can the technology be used to break the law or avoid the consequences of breaking the law?

Can you imagine ways that the technology can or will be used to break the law? Think about invading someone's privacy. Spying. Hurting people. Harassment. Steal things. Fraud/identity theft and so on. Or will people use the technology to avoid facing the consequences of breaking the law (using trackers to evade speed radars or using bitcoins to launder...

PRIVACY

Does the technology register personal data? If yes, what personal data?

If this technology registers personal data you have to be aware of privacy legislation and the concept of privacy. Think hard about this question. Remember: personal data can be interpreted in a broad way. Maybe this technology does not collect personal data, but can be used to assemble personal data. If the technology collects special personal data (like...

HUMAN VALUES

How is the identity of the (intended) users affected by the technology?

To help you answer this question think about sub questions like:

- If two friends use your product, how could it enhance or detract from their relationship?
- Does your product create new ways for people to interact?...

STAKEHOLDERS

Who are the main users/targetgroups/stakeholders for this technology? Think about the intended context by...

When thinking about the stakeholders, the most obvious one are of course the intended users, so start there. Next, list the stakeholders that are directly affected. Listing the users and directly affected stakeholders also gives an impression of the intended context of the technology.
...

DATA

Are you familiar with the fundamental shortcomings and pitfalls of data and do you take this sufficiently into...

There are fundamental issues with data. For example:

- Data is always subjective;
- Data collections are never complete;
- Correlation and causation are tricky concepts;
- Data collections are often biased;...

INCLUSIVITY

Does this technology have a built-in bias?

Do a brainstorm. Can you find a built-in bias in this technology? Maybe because of the way the data was collected, either by personal bias, historical bias, political bias or a lack of diversity in the people responsible for the design of the technology? How do you know this is not the case? Be critical. Be aware of your own biases....

TRANSPARENCY

Is it explained to the users/stakeholders how the technology works and how the business model works?

- Is it easy for users to find out how the technology works?
- Can a user understand or find out why your technology behaves in a certain way?
- Are the goals explained?
- Is the idea of the technology explained?
- Is the technology company transparent about the way their...

SUSTAINABILITY

In what way is the direct and indirect energy use of this technology taken into account?

One of the most prominent impacts on sustainability is energy efficiency. Consider what service you want this technology to provide and how this could be achieved with a minimal use of energy. Are improvements possible?

FUTURE

What could possibly happen with this technology in the future?

Discuss this quickly and note your first thoughts here. Think about what happens when 100 million people use your product. How could communities, habits and norms change?
